

## Landing Zone Preparation

- Size 100 x 100' (larger if more than one aircraft is requested)
- Flat surface without debris
- Free of overhead obstacles (wires, towers etc.)
- Mark landing zone at each corner using secured cones or fire personnel during the day and strobes at night
- Landing Zone coordinator should be standing with the wind to his or her back
- Provide Life Flight with the following patient information: number of patients, adult or pediatric, extricated or still entrapped
- Provide Life Flight with the following landing zone information: surface (road or field), location in relation to accident scene (Northwest etc.), any overhead hazards such as wires, trees or towers
